Change in Transparency Over Time

Regional Comparison

Usefulness of Budget Information Throughout the Budget Cycle

Saudi Arabia’s score of 0 out of 100 is substantially lower than the global average score of 45.
The Availability of Budget Documents Over Time

Moreover, the Government of Saudi Arabia has failed to make progress in the following ways:

- Not making the Executive's Budget Proposal, Enacted Budget, Year-End Report, or Audit Report available to the public.
- Not producing a Pre-Budget Statement, Citizens Budget, In-Year Reports, or Mid-Year Review.

Saudi Arabia's score of 0 on the 2015 Open Budget Index is largely the same as its score in 2012.

Public Participation

Evidence suggests that transparency alone is insufficient for improving governance, and that public participation in budgeting can maximize the positive outcomes associated with greater budget transparency.

To measure public participation, the Open Budget Survey assesses the degree to which the government provides opportunities for the public to engage in budget processes. Such opportunities should be provided throughout the budget cycle by the executive, the legislature, and the supreme audit institution.

Regional Comparison

Saudi Arabia's score of 0 out of 100 indicates that the public is provided with no opportunities to engage in budget processes.
The Open Budget Survey examines the extent to which legislatures and supreme audit institutions are able to provide effective oversight of the budget. These institutions play a critical role – often enshrined in national constitutions – in planning budgets and overseeing their implementation.

Oversight by the Legislature

The legislature provides no oversight during the planning stage of the budget cycle and no oversight during the implementation stage of the budget cycle.

The legislature does not have a specialized budget research office. The executive does not receive prior approval by the legislature before implementing a supplemental budget. Finally, in both law and practice, the legislature is not consulted prior to the virement of funds in the Enacted Budget, spending any unanticipated revenue, or spending contingency funds that were not identified in the Enacted Budget.

Oversight by the Supreme Audit Institution

The supreme audit institution provides weak budget oversight.

Under the law, it has significant discretion to undertake audits as it sees fit and the supreme audit intuition is provided with sufficient resources to fulfill its mandate. However, the head of the supreme audit institution can be removed without legislative or judicial approval, which undermines its independence. Finally, it has no quality assurance system in place.

Recommendations

Improving Transparency

Saudi Arabia should prioritize the following actions to improve budget transparency:
- Publish an Executive’s Budget Proposal, Enacted Budget, Year-End Report, and Audit Report.
- Produce and publish a Pre-Budget Statement, Citizens Budget, In-Year Reports, and Mid-Year Review.

Improving Participation

Saudi Arabia should prioritize the following actions to improve budget participation:
- Establish credible and effective mechanisms (i.e., public hearings, surveys, focus groups) for capturing a range of public perspectives on budget matters.
- Hold legislative hearings on the budgets of specific ministries, departments, and agencies as well as on audit reports at which testimony from the public is heard.
- Establish formal mechanisms for the public to assist the supreme audit institution to formulate its audit program and participate in audit investigations.

Improving Oversight

Saudi Arabia should prioritize the following actions to strengthen budget oversight:
- Establish a specialized budget research office for the legislature.
- Ensure the executive receives prior approval by the legislature before implementing a supplemental budget.
- Require legislative or judicial approval to remove the head of the supreme audit institution.
The Open Budget Survey uses internationally accepted criteria developed by multilateral organizations such as the International Monetary Fund (IMF), the Organisation for Economic Co-operation and Development (OECD), and the International Organisation of Supreme Audit Institutions (INTOSAI). It is a fact-based research instrument that assesses what occurs in practice through readily observable phenomena. The entire research process took approximately 18 months between March 2014 and September 2015 and involved about 300 experts in 102 countries. The Survey was revised somewhat from the 2012 version to reflect emerging developments in accepted good practice and to strengthen individual questions. A full discussion of these changes can be found in a technical note on the comparability of the Open Budget Index over time (see below).

Survey responses are typically supported by citations and comments. This may include a reference to a public document, an official statement by the government, or comments from a face-to-face interview with a government official or other knowledgeable party.

The Survey is compiled from a questionnaire completed for each country by independent budget experts who are not associated with the national government. Each country’s questionnaire is then independently reviewed by an anonymous expert who also has no association to government. In addition, IBP invites national governments to comment on the draft results from the Survey and considers these comments before finalizing the Survey results.

Despite repeated efforts, IBP was unable to get comments on the draft Open Budget Questionnaire results from the Government of Saudi Arabia.

Research to complete Saudi Arabia’s Open Budget Survey was undertaken by the Open Budget Initiative,
