

# How Much Should Counties in Kenya Receive in 2018/19? | April 2018

## INTRODUCTION

Each year Kenya's Parliament must decide how national revenue will be shared between national and county governments. This discussion is informed by recommendations from the Commission on Revenue Allocation (CRA) and the National Treasury. The CRA must table its recommendations in parliament by the 1<sup>st</sup> of January while National Treasury's recommendations are contained in the Budget Policy Statement (BPS) that is tabled in the National Assembly on or before the 15<sup>th</sup> of March. The BPS is tabled together with the Division of Revenue Bill (DORB) and County Allocation of Revenue Bill. This analysis compares the recommendations made by both agencies on the equitable share and conditional grants. Three key issues emerge, similar to what we [reported in 2017](#):

1. Both agencies do not agree on the revenue growth factor that should be used to determine the growth of the equitable share between 2017/18 and 2018/19 (same as the last two years).
2. The formation and allocation to conditional grants do not seem to follow any predictable pattern, and the growth in their allocations from one year to the next appear to be arbitrary. From this trend, it's unclear if the allocation to some of the grants are adequate, and their long-term sustainability is questionable.
3. The distribution criteria for some of these funds is inequitable and unfair to recipients of the funds.

## OVERVIEW

The CRA recommendation for the equitable share and conditional grants in 2018/19 is Ksh. 367.7 billion, which is Ksh. 28.2 billion higher than what the National Treasury has recommended. Both agencies differ on their equitable share and conditional grants allocations. The CRA's figures are 13 percent higher than what was approved for 2017/18 while National Treasury's recommended allocation is only 4.4 percent higher.

**TABLE 1. CRA AND NATIONAL TREASURY RECOMMENDATIONS COMPARED TO APPROVED ALLOCATION FOR 2017/18**

	<b>DORA 2017</b>	<b>CRA Recommendation 2018/19</b>	<b>National Treasury (BPS 2018)</b>	<b>% Change between DORA 2017 and CRA Recommendations</b>	<b>% Change between DORA 2017 and BPS 2018 (National Treasury)</b>
Equitable Share	302.0	337.2	314.0	11.7%	4.0%
Conditional Grants (excluding Loans and Grants)	23.3	30.5	25.5	30.9%	9.6%
<b>Total</b>	<b>325.3</b>	<b>367.7</b>	<b>339.5</b>	<b>13.0%</b>	<b>4.4%</b>

What are the main drivers of their differences? Are we progressively getting more clarity on processes and distribution criteria as we start the second cycle of devolution? Are there areas of functional assignment that are still pending that could mean some functions and their funding is still at the national government level?

## THE REVENUE GROWTH FACTOR USED TO ADJUST THE EQUITABLE SHARE REMAINS UNCLEAR

Every year since the start of devolution in 2013/14, CRA and National Treasury have recommended different figures for the equitable share. This continues to be the case in 2018/19, even though the base figure used by both agencies was Ksh. 302 billion, which was the approved equitable allocation for 2017/18. It is the revenue growth factor that varies between agencies, as has been the case for the last two years. National Treasury proposed a growth factor of 7.8 percent for 2016/17 that fell to 6.7 percent for 2017/18, and has now fallen further to 4 percent for 2018/19. The CRA has always applied higher adjustment weights, using 15 percent in 2016/17 and 2017/18, but has now lowered the revenue growth factor to 8.5 percent for 2018/19.<sup>1</sup> There is no consistent approach in deciding the size of the growth of the equitable share from one year to the next (see Table 2). Except for 2015/16, each year has seen different measures applied to the allocations, and it's also important to note that the National Treasury's growth factor has been declining each year over this period.

<sup>1</sup> This includes 7.1 percent is based on a three-year inflation adjustment and 1.4 based expected growth in services.

**TABLE 2. CHANGES IN THE REVENUE GROWTH FACTOR FOR THE EQUITABLE SHARE**

Year	Proposed Growth		Basis for Proposed Revenue Growth	
	CRA	National Treasury	CRA	National Treasury
2015/16	10.4%	10.4%	3-Year average growth in ordinary revenue	3-Year average growth in ordinary revenue
2016/17	15.0%	7.8%	3-Year average growth in ordinary revenue	Not provided
2017/18	15.0%	6.7%	3-Year average growth in ordinary revenue	3-Year average month on month inflation
2018/19	8.5%	4.0%	3-Year average inflation	Not provided

Source: CRA Recommendations 2015-2018 and BPS 2015-2018

To ensure fairness in the division of revenue, the revenue growth factor should be based on the revenue raised in the country and how it grows over time. Using inflation as opposed to revenue growth results in substantially lower projections for counties. The average growth in ordinary revenue between 2011 and 2017 was 14 percent. The use of inflation biases the division of revenue process toward national government; when actual revenue growth has been consistently above inflation, then the difference between the inflation rate and the revenue growth is captured entirely by the national government. This is not consistent with the principles of fairness in revenue sharing. In addition, ordinary revenue is projected to grow by 13.6 percent between 2017/18 and 2018/19. Therefore, the adjustments by both agencies for 2018/19 equitable shares are much lower than historical growth and projection for the next year.

## ADDITIONAL FUNDING FOR NEW DEVOLVED FUNCTIONS

CRA and National Treasury have not recommended any new funding for functions that might have been devolved in 2017. However, CRA does include the costs for additional roads and library services that had been devolved by the Transition Authority in 2016, to its 2017/18 base of Ksh. 302 billion. This adds up to Ksh. 310 billion, which CRA used as the base before the adjustment for revenue growth. This, together with the use of different inflation rates, explains the difference in the final recommendation as compared to National Treasury, shown in Table 1.

Based on this approach, the recommendation by CRA is 12 percent higher than the equitable share approved for 2017/18, compared to only four percent by the National Treasury.

# CONDITIONAL GRANTS

## THE RECOMMENDED GRANTS FOR 2018/19

The Budget Policy Statement 2018 has allocations for six conditional grants with a total allocation of Ksh. 25.5 billion, nine percent higher compared to the total allocations approved in 2017/18. For the second year, the free maternal healthcare is not allocated any money as a conditional grant as its structure changed from a reimbursement to counties to a special grant to the National Health Insurance Fund (NHIF). This means the allocation will not go to counties as cash grants. The National Treasury list of conditional grants to counties also includes loans and grants, totaling Ksh. 33.2 billion that will be managed by the national government.

CRA has proposed nine conditional grants that are made up of seven previous grants and two new grants that were also in its recommendations for 2017/18. The two additional grants are related to cancer diagnosis and treatment. The Commission recommends two regional facilities be built and equipped, with their location based on cancer prevalence in the country. Like the recommendation in 2017/18, the Commission recommends the grant be spent by the national government, and its unclear why it is listed as a conditional grant to counties.

**TABLE 3. NEW CONDITIONAL GRANTS RECOMMENDED BY CRA FOR 2018/19**

<b>Current Conditional Grants (Billions)</b>	<b>2017/18 DORA</b>	<b>2018/19 CRA Recommendation</b>	<b>2018/19 National Treasury Recommendation</b>	<b>% Increase of CRA Grants to DORA</b>	<b>% Increase of National Treasury Grants to DORA</b>
Level 5 hospitals	4.2	4.5	4.3	7%	3%
Free maternal health care	-	3.4	-	-	-
Compensation for user fees forgone	0.9	0.9	0.9	0%	0%
Leasing of medical equipment	4.5	4.5	9.4	0%	109%
Road Fuel Levy Fund	11.1	8.6	8.3	-23%	-25%
Development of Youth Polytechnics	2.0	2.0	2.0	0%	0%

## GROWTH IN ALLOCATIONS TO CONDITIONAL GRANTS

Regarding grants that were in the DORA 2017 and are recommended to continue in 2018 by the National Treasury, three have the same allocations. Both agencies have recommended a grant of Ksh. 900 million for the grant for fees foregone in dispensaries and health centers in all 47 counties. CRA recommends that the compensation be based on the number of annual outpatient visits made to these health facilities in each county, which assumes that the cost for compensation will remain the same. In actual sense, when adjusted for inflation, the real value of the grant is lower than Ksh. 900 million. In addition, data available in the Statistical Abstracts by the National Bureau of Statistics for 2015 and 2016 shows that the number of outpatient visits to health facilities is increasing.<sup>2,3</sup> For example, the number of visits by children under the age of five increased by 1.5 million between the two years. Clearly, this case illustrates how the costs of delivering outpatient services would not be the same between the two years.

The other two grants are Ksh. 2 billion for the development of youth polytechnics across all 47 counties and Ksh. 600 million for construction of county headquarters in five counties: Isiolo, Lamu, Nyandarua, Tana River, and Tharaka Nithi counties.

Level 5 hospitals were allocated Ksh. 4.2 billion in 2017/18, CRA recommends an increase of seven percent (to Ksh. 4.5 billion), while National Treasury has a lower adjustment of three percent. Neither explain their allocation for the facilities and the basis for this increase. However, both agencies' recommendations are lower than year on year inflation average over the last three years to June of 2017, which stands at 7.3 percent. Therefore, in real terms the recommended allocations are lower than what was allocated in 2017/18. However, the distribution criteria was based on percentage beds occupancy in the previous two years, a reversal from the criteria proposed by CRA for 2017/18, where each hospital's proportion of in-patient days was used.

The use of percentage bed occupancy ignores the main driver of costs in these facilities, which is the difference in the number of people who actually visit the facilities. This criterion gives less funding to counties with higher bed capacity or a higher number of visits (inpatient and outpatient).<sup>4</sup> In addition, the approach only looks at one measure of hospital needs which in inpatient care but ignores other drivers of needs such as staffing and hospital infrastructure.

The allocation for road maintenance under the Road Fuel Levy is to decrease by about one quarter based on recommendations from both agencies. The allocation to counties is 15 percent of what the Kenya Roads Board is

<sup>4</sup> <https://www.internationalbudget.org/wp-content/uploads/ibpkenya-equity-week-2016-issue-4-regional-hospital-funding.pdf>

projected to collect in the current year, in this case 2017/18. Both documents do not explain why the 15 percent proportion is lower for 2018/19 than it was in 2017/18. In addition, in its 2017/18 recommendations CRA had proposed an increase in the allocation to counties to 25 percent after the additional roads that were devolved to counties in the Transitional Authority gazette of 2016. It does seem plausible that additional roads would mean additional resources for road maintenance. That discussion is not included in CRA’s recommendation for 2018/19 and the Senate should explore this issue further.

Furthermore, CRA recommends that the fund be distributed based on its equitable revenue sharing formula. However, the formula does not directly measure the length of existing roads that counties are meant to maintain. Therefore, the CRA’s approach would be unfair.

Lastly, the allocation to the leasing of medical equipment is increased by 109 percent based on the recommendation from National Treasury. The grant was allocated Ksh. 4.5 billion in 2017/18 and CRA has recommended a similar amount for 2018/19. The BPS does not explain the increase in allocation to the grant.

## CONCLUSION

As counties start the next cycle of five years, the Division of Revenue discussion has to focus on learning from previous years to improve the process going forward. The National Treasury and CRA still do not seem to have a common approach to how they adjust the equitable share each year. In 2015/16 the agreement was to use a three-year revenue growth average as the growth factor but for 2018/19 that seems to have changed to inflation. This shift is not explained but it does affect the predictability of county revenue in the coming years. In addition, the use of inflation is unfair to counties because the revenue collected by government has grown by margins that are larger than inflation over the last five years. Secondly, conditional grants funding and how they are distributed need more focus if their objectives are to be met. How much is to be allocated to these funds each year and how these allocations grow should be explained and justified.
